

# BTA

## PROCESS OVERVIEW

### Introduction

Our process begins with an introduction meeting so all stakeholders can understand the process and requirements.

### Walk-through

We perform a walk-through of your environment collecting data on your needs, equipment usage and user work-flow.

### Findings

We compile the data and produce findings giving you a 360° view of your current situation, spend, and opportunities for improvement.

### Recommendations

We make recommendations based on our findings to meet the needs and goals of your organization.

### Implementation

Our team of expert integrators will implement your solution with virtually zero interruption to your organization's daily operations.

### Account Review

We provide regular account reviews to stay ahead of changing needs, user needs and performance expectations.

### Equipment Refresh

Between 36 and 48 months, we will refresh your fleet to avoid counter-productivity and provide the highest value for your investment.

## What's a Business Technology Assessment?

Many vendors in our industry will offer to perform a technology assessment. Most competitive assessments consist of meter collection and a like-for-like replacement strategy.

**UBEO is different.** Our assessment seeks to uncover opportunities to improve your team's relationship with their supporting technology. We seek to streamline your team's work-flow and to optimize your business document systems. Our findings will result in a solution that is the best mix of performance, cost and usability.

### Unique UBEO Partnership benefits:

- A flexible rental that provides the ability to right-size your business technology to meet your current and future needs
- The highest level of service, uptime and performance in the industry

## A UBEO BTA WILL HELP YOU:

Understand your Organization's Unique Document Work-flow
